## BIOTHESIOMETRY STUDY

**RIGHT**

**LEFT**

\*\* - Clinically correlated

AVERAGE : **32** Severe Loss of Vibratory Perception\*\*  
(in Volts)

**31** Severe Loss of Vibratory Perception\*\*

Beyond 25 Volts is 7 times more prone to ulceration in a diabetic foot than a normal foot. It is increasing to 23 times beyond 42 Volts. (Higher the threshold, higher the risk).
